Some of the World Geography series activities: Learn localities and time zones, read the steps and the complete diagram of changes over time, make a crossword (frequent activity) on the political division in Europe, read the table and answer the questions, read the description of the tour and writing songs, do research on the Volga river and on the city that crosses, choose a city and create an advertising manifesto, create a climograph by tracing precipitation and temperature and rainfall the teacher's guide provides an overview of each unit with suggestions For extension activities, as well as a complete response to all practical activities and unity reviews. (Vocabulary definitions are included in the glossary found both in the guidance for the teacher and in the student's book.) A brief introduction to the topic followed by a didactic text that presents essential information in short sections and easy understanding. Every unit ends with a review (multiple choice questions) and several application activities. Each student book (variable length) is divided into a unit, each of which has a series of lessons on topics related to a lesson by subject. This second edition of the useful Power Basics series is more robust and easier to use. Step-by-step lessons can be managed with well-defined examples. A summary of the rules and other important information, a guidance glossary to the pronunciation and an index constitute the reference section that accompanies every student's text. The guide includes duplicates of the glossary and appendices from the student's text.
